# DYNAMIC
LIFECYCLE INNOVATIONS

Remote Asset Retreival

Decentralized work environments make IT collection difficult. With Dynamic, we send ready-to-use boxes, shipping materials, and clear instructions direct to your employee to simplify the return process.

STANDARD RETRIEVAL PROCESS

Clients receive ready-to-use (fully insured) boxes, shipping materials, and clear instructions, enabling easy participation from any location.

RETRIEVAL + RETIREMENT

Once assets are received from the client and logged in our system, Dynamic completes our fully secure data destruction process and prepares the device for resale or final disposition.

RETRIEVAL + REDEPLOYMENT

After the retrieval process, assets are wiped and prepped for redeployment within your organization. This can include device reimaging or reconfiguration in alignment with client specifications.

RETRIEVAL + WAREHOUSING

Following the retrieval process, Dynamic's warehousing service provides a secure environment for storing IT assets awaiting redeployment, resale, or retirement.

RETRIEVAL + LEASE RETURN

We coordinate retrieval logistics, wipe data per policy, and document the chain of custody. Returns are tracked by serial number, matched to client lease agreements, and sent to the leasing organization.

Optimize ITAD for your remote workforce.

Let Dynamic handle the retrieval, redeployment, return, or storage of your assets.
