

Secure Data Destruction

Guarantee the protection of your data and your brand with secure data destruction services onsite or at a Dynamic facility.

STANDARD DATA DESTRUCTION PROCESS

Dynamic securely sanitizes all data-bearing media while maintaining a serialized chain of custody from pickup through final disposition. Certificates are issued via our online portal.

ASSET TRACKING

Asset Tracking offers complete visibility into the status and movement of IT equipment throughout the ITAD process. The serial numbers of both the asset and data-bearing device within the asset are tagged and tracked through our ERP system. Updates are visible through our portal or API integration, providing clients with complete insight into location, status, and processing milestones for each asset.

SERVICE OPTIONS

- Onsite tracking available
- Barcode or RFID tagging
- Integration with ITAM tools and custom reporting templates

PHYSICAL DESTRUCTION & SHREDDING

Complete data erasure through the destruction and shredding of your assets guarantees brand protection and compliance. When software wiping is not permitted, physical destruction prevents recovery. State of the art, onsite destruction is ideal for regulatory environments demanding visual and physical confirmation of data disposal.

SERVICE OPTIONS

- Data erasure
- Onsite mobile shredding, bulk off-site destruction
- Witnessed or recorded events
- Compliance reports

Eliminate risk and protect your brand reputation.

Dynamic delivers secure data destruction you can trust.
